Walkthrough of Forms

List of concepts involved :

1. What are HTML Forms ?
2. Why do we need Forms?
3. Different tags and provisions in Forms
4. A sample registration form

HTML Form:

- A portion of a page known as an HTML form contains controls including text fields, password fields, checkboxes, radio buttons, a submit button, menus, etc.

- An HTML form makes it easier for the user to input data like name, email address, password, phone number, etc. that may be transferred to the server for processing.

Why use HTML Form ?

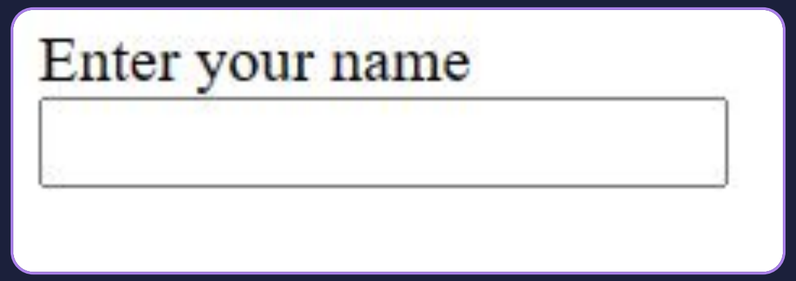
- If you wish to collect data from a site visitor, HTML forms are necessary.

- For instance, if a user wants to buy something online, he or she must fill out the form with the shipping address and credit/debit card information so that the item may be delivered to the specified address.

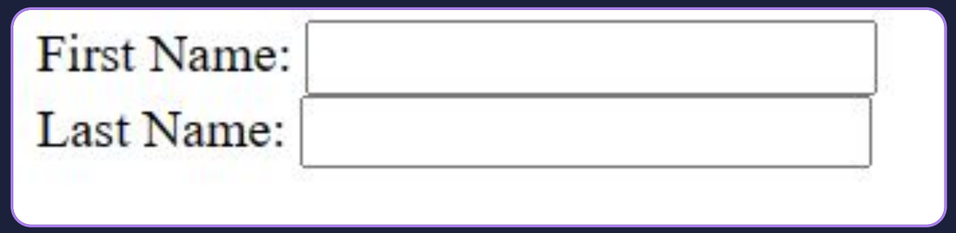
HTML tags and elements

- HTML <form> element
- HTML TextField Control
- HTML <textarea> in form
- Label in Form
- HTML Password Field Control
- Radio Button Control
- Checkbox Control
- Submit button control
- HTML <fieldset> element
- A Sample HTML Form

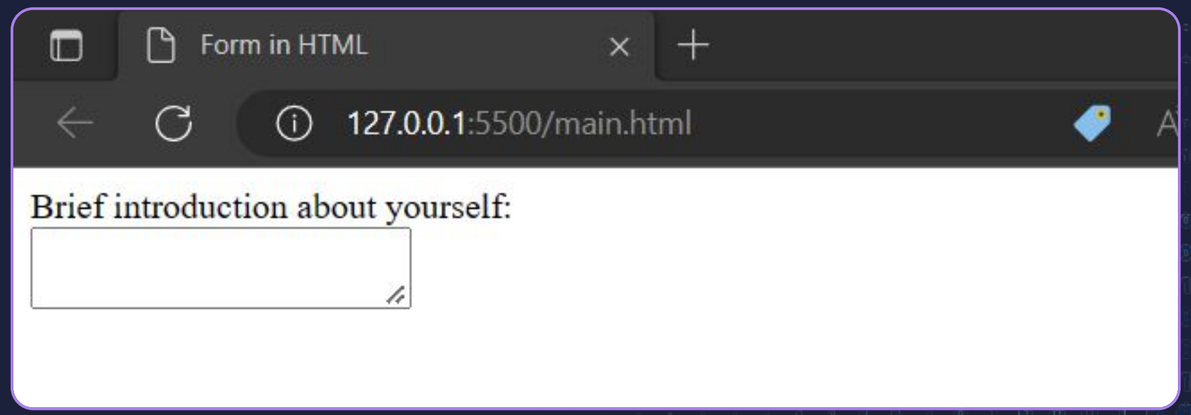
HTML <form> element



HTML TextField Control



HTML <textarea> in form



Label in Form

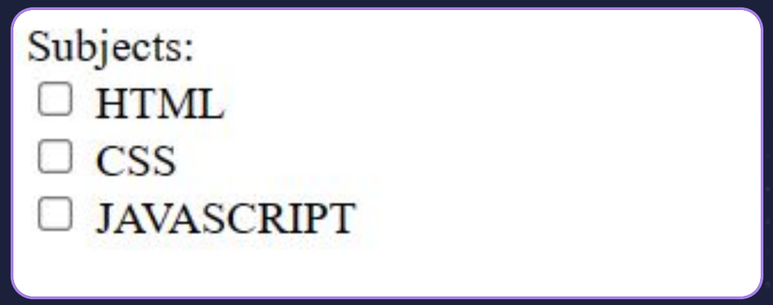
First Name:

Last Name:

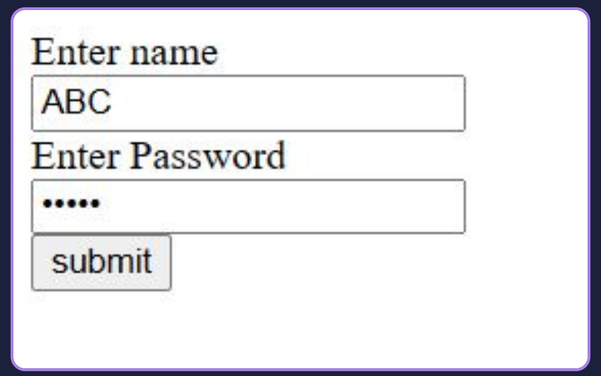
HTML Password Field Control

Radio Button Control

Checkbox Control



Submit button control



HTML <fieldset> element
