PW SKILLS

External CSS

List of concepts :

1. External CSS
2. Advantages and disadvantages of External CSS
3. Example

External CSS

- When you need to make changes to several pages, you often use the external style sheet.
- It is perfect in this situation because it enables you to alter just one file to alter the appearance of the complete website.
- It uses the <link> tag on every page and the <link> tag should be put inside the head section.

- Example:

```
<head>
<link rel="stylesheet" type="text/css" href="mystyle.css">
</head>
```

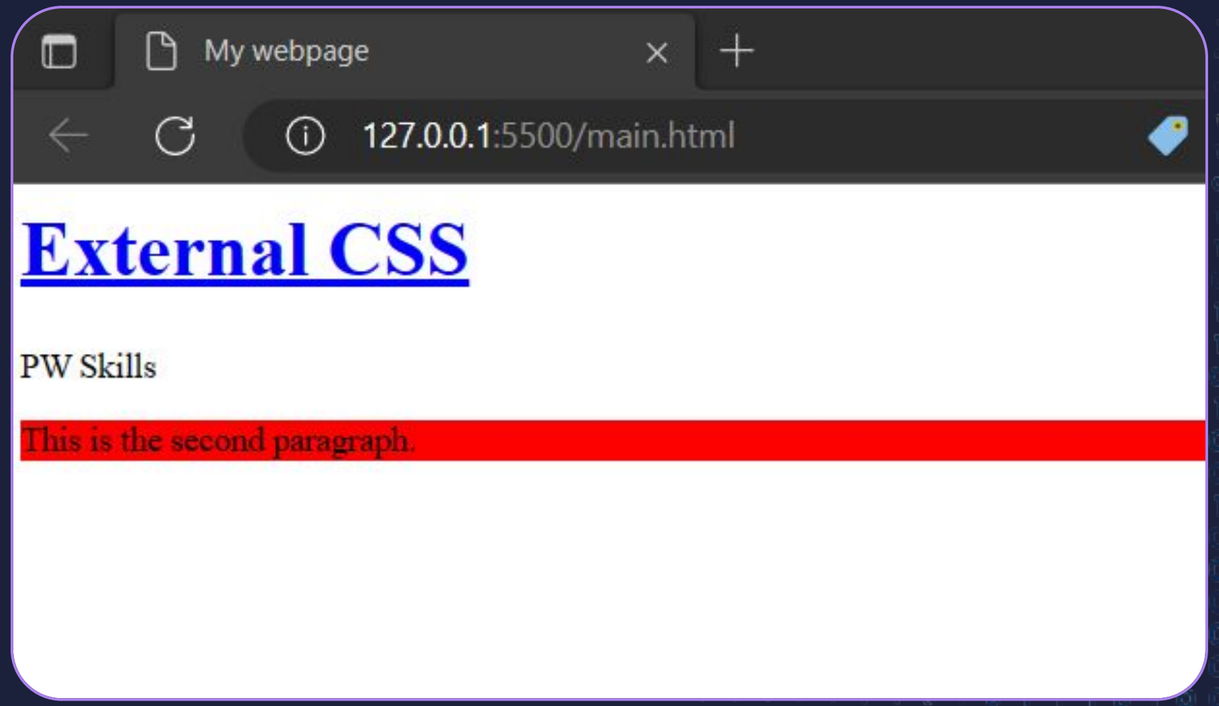
Advantages of External CSS:

- The style of several documents can be controlled from site by using them.
- Multiple HTML elements can have many documents, where classes can be created.
- To group styles in complex situations, selector and grouping methods are used.

Disadvantages of External CSS:

- Extra download is needed to import documents having style information.
- To render the document, the external style sheet should be loaded.
- Not practical for small style definitions.

Example



My webpage
127.0.0.1:5500/main.html
External CSS
