# Introduction to Images in websites.

Images are a common element of web design, and they serve a number of different purposes on websites.

# Some of the main uses of images on websites include:

1. Visual appeal
2. Branding
3. Illustration
4. Navigation

# The basic syntax of the img tag.

To include an image in an HTML page, you can use the `<img>` element. The `<img>` element is a self-closing tag, which means that it doesn't have a closing tag.

```
