

Explore and bring in fonts

Lecture CheckList

1. Introduction to fonts.
2. Introduction to Google Fonts.
3. Adding Google Fonts to the project.

Introduction to fonts

- Fonts are an essential aspect of design and can greatly affect the look and feel of a website or document.
- They can also play a role in how easily the content is understood and absorbed by the reader. Different fonts can convey different tones and moods, so it's important to choose a font that is appropriate for the context and aligns with a project's overall design and branding.
- Consistent font throughout a project helps to create a cohesive and professional look.

Introduction to Google Fonts

- Google Fonts is a library of free, open-source fonts that you can use on your web projects.
- It was launched in 2010 and has since become one of the most popular sources for web fonts, with over 800 fonts available.
- The fonts are optimized for the web and can be easily integrated into a website by including a link to the Google Fonts in the HTML file.
- The fonts are free to use and can be easily customized.
- Google Fonts also consists of a range of useful tools, such as the ability to preview and compare different fonts and generate the necessary code for implementation.

Adding Google Fonts to a Web Project

Step 1: Browse the Google Fonts library

Step 2: Select the fonts and customize the styles.

Step 3: Generate the code for adding the fonts to your project.

Step 4: Use the fonts in your CSS.
