

# Text

# List of concepts :

1. Text-color
2. Text-alignment
3. Text-decoration
4. Text-transformation
5. Text-indentation
6. Letter spacing
7. Line height
8. Word spacing

Text

# Text Color

- used to set the color of the text

PW is the most affordable, reliable, valuable learning platform

# Text Alignment

Text alignment property CSS has the following properties

- text-align
- text-align-last
- direction
- unicode-bidi
- vertical-align

# Text Decoration

The text-decoration property specifies the decoration added to text.

## Property Values

- **text-decoration-line** : Sets the kind of text decoration to use (like underline, overline, line-through)
- **text-decoration-color** : Sets the color of the text decoration.
- **text-decoration-style** : Sets the style of the text decoration (like solid, wavy, dotted, dashed, double)
- **text-decoration-thickness** : Sets the thickness of the decoration line

# Text Transformation

The text-transform property controls the capitalization of text.

## Property Values

- none : No capitalization. The text renders as it is. This is the default.
- capitalize : Transforms the first character of each word to uppercase.
- uppercase : Transforms all characters to uppercase.
- lowercase : Transforms all characters to lowercase.

# Text Indentation

An indentation is the space at the beginning of a line of writing. The text-indent property specifies the indentation of the first line in a text-block.

# Letter Spacing

This property is used to specify the space between the characters of the text.

The size can be given in px.

# Line Height

This property is used to set the space between the lines.

# Word Spacing

The word-spacing property increases or decreases the white space between words
